

How to use Sherry Expense Tracker

A quick, dual-currency way to log what you spend and earn, and see where it goes. This guide walks through every screen — Entry, Overview, History, and Settings — the way you'll actually meet them in the app.

Recording an expense or income

This is the screen the app opens to. It's built for one thing: logging a transaction in as few taps as possible.

- 1 Open the app — you land on **Entry**, already set to **Expense**.
- 2 Type the amount. It's shown in big digits so it's easy to read at a glance. Tap **Rs** to switch the currency for this entry — the default is Rupees, and Rupees / Euros are pre-selected as your two working currencies.
- 3 Logging income instead? Tap **Income** — the screen switches to green and the category defaults to **Salary**.
- 4 Pick a **Category** from the dropdown. Expenses default to **PK Groceries**, since that's the most frequent one.
- 5 The **Date** defaults to today — change it if you're logging something from earlier (future dates aren't allowed). Add an optional **Comment** for context, like "milk and bread."
- 6 Tap **Save Expense** (or **Save Income**). You'll get a quick confirmation, and the amount resets so you're ready for the next one.

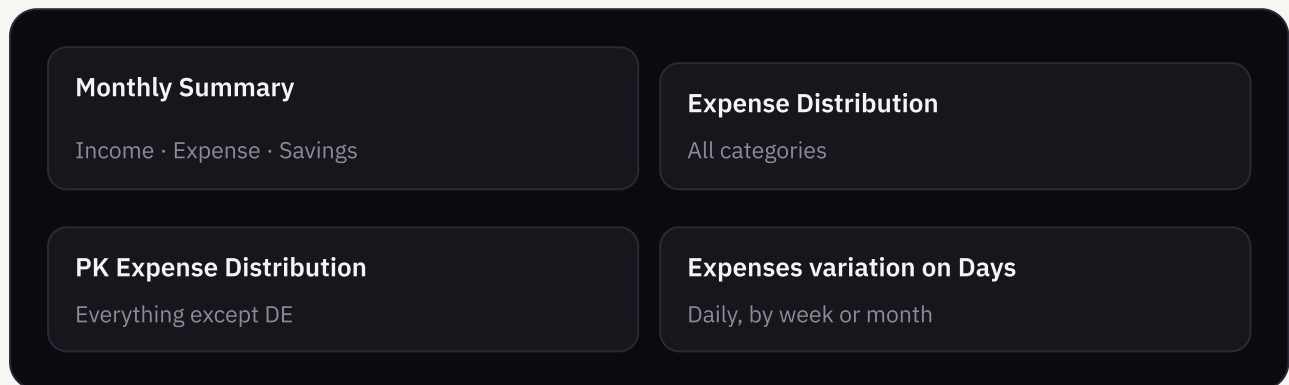

A dark-themed mobile app interface for recording a transaction. At the top, there are two toggle buttons: 'Expense' (active, highlighted in blue) and 'Income'. Below these, the amount '1800' is displayed in large white digits, preceded by 'Rs'. At the bottom, there is a dropdown menu showing 'PK Dine Out / Delivery' with a downward arrow. The entire interface is set against a dark background with rounded corners.

↳ What the entry field looks like mid-entry

- 💡 **Tip** — the comment box and date are optional to touch. For a routine grocery run, amount → save is the whole flow.

Reading your month at a glance

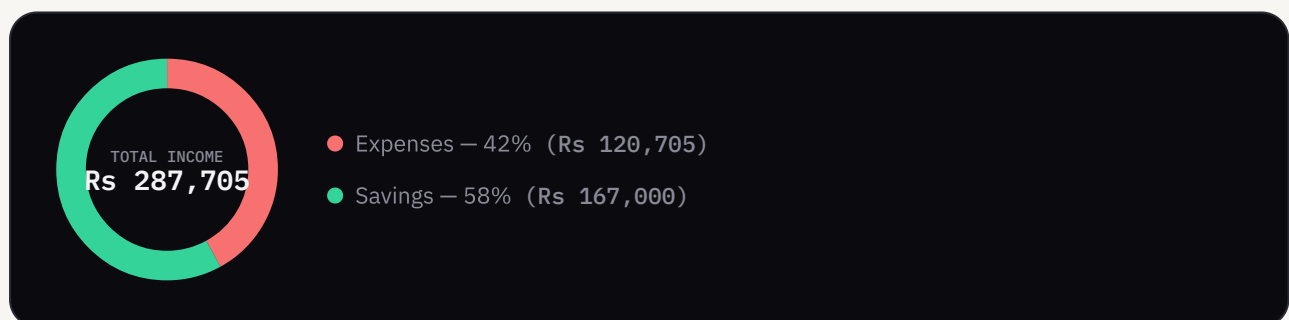

Five graph cards, each covering one calendar month. Tap a card to open it full-screen; swipe or use the arrows to move between months. Tap **Rs** in the top corner of any graph to see it in your other currency.

↳ The Overview grid — tap any card to expand it

Monthly Summary

A ring showing total income for the month at its center, split into the percentage that went to **expenses** and the percentage you kept as **savings**.

↳ September 2026, from the sample demo data

Expense Distribution & PK Expense Distribution

Expense Distribution covers every category. **PK Expense Distribution** is the same idea with **DE** and **DE Air Ticket** left out — useful if some of your spending happens in a second country and you want the local picture on its own. Tap any category to jump straight to its entries in History for that month.

↳ Tapping "PK Rent" opens History filtered to that category, that month

Expenses variation on Days

A bar per day — expense amount on the vertical axis, date along the bottom. Toggle between a **Week** view (Monday to Sunday) and a **Month** view (1st to last day), and swipe the chart to move to the next or previous period. Weekdays and weekends are colored differently, and tapping a bar lists everything spent that day.

↳ Week of 14–20 Sept 2026 — total Rs 8,101

Yearly Overview

Four running totals for the year — salary, savings, expenses, and average monthly spend — plus a bar-per-month chart of income against expenses. The best month is picked out in green, the worst in red.

TOTAL SALARY

Rs 2,391,103

TOTAL SAVINGS

Rs 1,413,705

TOTAL EXPENSES

Rs 977,398

AVG MONTHLY EXPENSE

Rs 122,175

↳ 2026 so far — April was the best month, June the worst

Every entry, editable

A running list of everything you've logged, newest first, grouped by month.

Expenses show in red, income in green.

15 Sept • PK Groceries	Rs 2,200
milk and bread	
14 Sept • PK Dine Out / Delivery	Rs 1,800
dinner out	
12 Sept • Health	Rs 7,500
checkup	

↳ Date : Amount : Category — tap the pencil to edit

Editing, deleting, and filtering

- **Edit** — tap the pencil on any row to open it in the same form you used to create it. Changes need a confirmation before they save.
- **Delete** — open an entry and use Delete Entry at the bottom. This also asks for confirmation first.
- **Filter** — tap Filter to narrow the list by date range, category, or a word from the comment.
- **Back** — the back arrow returns you to wherever you came from: Overview, if you drilled into a category or day; the Entry screen otherwise.

All categories ▼

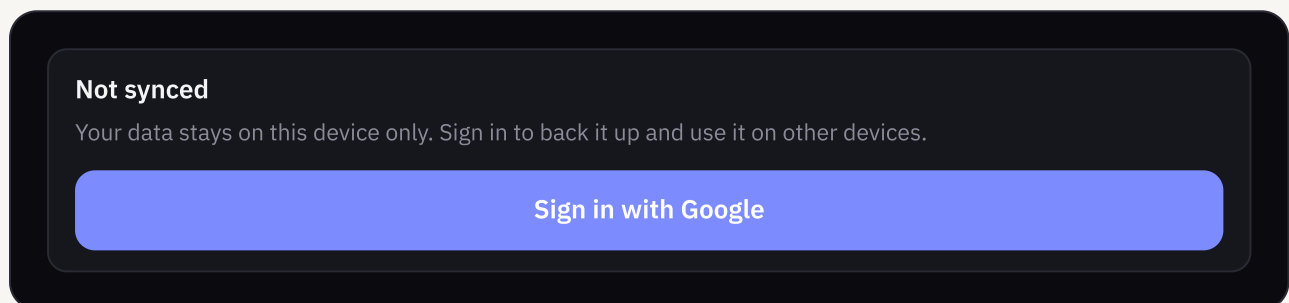

↳ The Filter panel, opened above the list

Everything else lives here

Tap the gear icon from any tab. Settings covers your account, your data, and how the app is configured.

Cloud sync — signing in with Google

Signing in is optional. Without it, your entries live only on this device. Sign in and they're copied to a private cloud database under your Google account, so a new phone or a cleared browser won't lose anything.

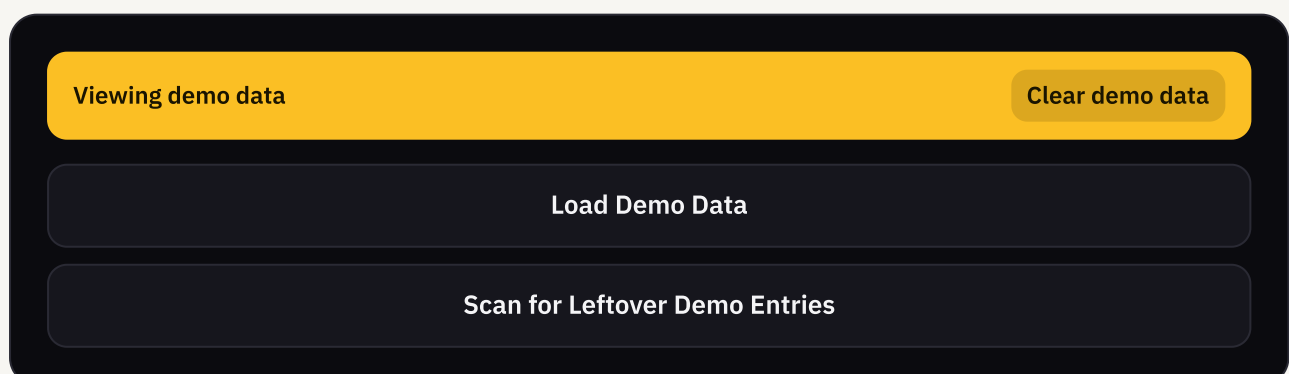

↳ Account card, before signing in

- **Switch account** — move to a different Google account without losing what's on the device.
- **Sign out** — stop syncing; your data stays put and keeps working offline.
- **Sync status** — a small dot next to your email shows Syncing, Synced, or Sync error.
- **Sync error detail** — if a sync fails, the actual error is shown with a Copy error button, so it can be shared without needing developer tools.

Demo Data

Want to see what a fully-used app looks like before committing your own numbers? Load a few months of realistic sample data, explore every graph and screen, then put it away again.

↳ A yellow banner marks every screen while demo data is active

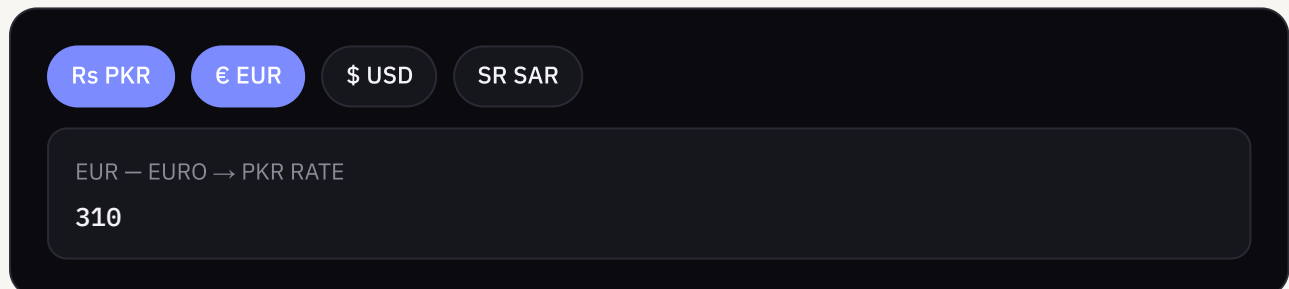

- **Load Demo Data** — your real entries are tucked away and swapped for the sample set. Signing in with Google is disabled while this is on, so demo entries can never reach a real cloud account.
- **Clear Demo Data** — restores your real data exactly as it was.
- **Scan for Leftover Demo Entries** — a safety net: checks your real entries for anything that still matches the sample data, in case demo data was ever mixed in by mistake, and lets you review and remove it.

Personal Info & Delete

Your name, gender, and date of birth — used only within the app. **Delete ALL Data Entries** and **Delete Personal Info** both ask for confirmation, since neither can be undone.

App Settings

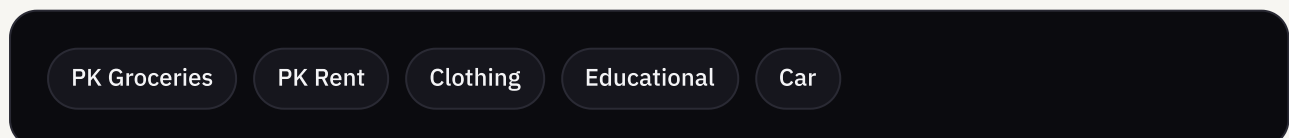

- **Theme** — toggle between Dark and Light.
- **Currencies** — choose up to two from Rs, €, \$, Saudi Riyal, Canadian Dollar, Australian Dollar, and £. Rs and € are selected by default.
- **Exchange rate** — for your second currency, set how many Rupees it's worth. This is what lets Overview and PDF exports combine both currencies into one total.

↳ 1 EUR is treated as Rs 310 throughout the app

Expense Categories

Add a category any time it doesn't fit an existing one; delete one you'll never use. At least one has to remain.

Export & About

- **Export Monthly / Yearly Overview as PDF** — pick a month and year, then generate a shareable PDF of that Overview.

- **Share App** — sends the app's live link, so anyone can start using it from a browser.
-

05 • INSTALL AS AN APP

Add it to your home screen

Sherry Expense Tracker is a Progressive Web App — it installs like a native app, and keeps working without a connection.

- **Install** — open the app's link in your phone's browser and choose "Add to Home Screen" (iOS Safari) or accept the install prompt (Android Chrome). It then opens full-screen, with no browser bar, like any other app icon.
- **Works offline** — once installed, you can open the app, add entries, and browse History and Overview with no signal. Anything logged offline syncs automatically the next time you're online and signed in.

No sign-in needed for offline use — it works locally either way. Signing in only adds the cloud backup on top.

Frequently asked

Do I have to sign in to use the app?

No. Everything works fully offline on-device. Signing in with Google is only for backing up to the cloud and using the same data on another device.

What happens to my real data when I load demo data?

It's set aside automatically and comes back exactly as it was the moment you tap Clear Demo Data. While demo data is showing, Google sign-in is turned off so it can't be mixed into a real synced account.

Can I log an expense in a currency I don't normally use?

You can hold up to two supported currencies at a time (Settings → App Settings → Currencies), and switch which one an entry uses right from the Entry screen.

Can I recover a deleted entry?

No — both entry deletion and "Delete ALL Data Entries" are permanent, which is why each asks for confirmation first.

Why is "DE" excluded from PK Expense Distribution?

"DE" and "DE Air Ticket" are meant for spending tied to a second country. PK Expense Distribution exists to show your local (Pakistan-side) spending on its own, without that mixed in.
